

DeepSeek API Usage

In one month, 15 million tokens cost me approximately 23.5 CNY.

This was my usage in one day:

Type	Tokens
Input (Cache Hit)	946,816
Input (Cache Miss)	2,753,752
Output	3,100,977

The calculation is as follows:

$0.94 * 0.1 + 2.75 * 1 + 3.10 * 2 = 11.83$

So, depending on the task, the token usage largely depends on the input (cache miss) and output.

This result aligns with the expected cost.
