

# 裝載 Arch Linux

Lenovo 小星 14IAH8 筆記型電腦。

```
$ diskutil list
```

```
/dev/disk6 (external, physical): #: TYPE NAME SIZE IDENTIFIER 0: FDisk_partition_scheme *30.8 GB disk6  
1: Windows_FAT_32 NO NAME 30.8 GB disk6s1
```

```
% diskutil unmountDisk /dev/disk6
```

卸載 disk6 失敗：至少有一個卷未能卸載。卸載被 PID 319 (/System/Library/Frameworks/CoreServices.framework/Versions/A/Support/launchd-helperd) 拒絕。拒絕者父進程 PPID 1 (/sbin/launchd)。

```
% diskutil unmountDisk force /dev/disk6
```

```
sudo dd if=archlinux-2025.02.01-x86_64.iso of=/dev/rdisk6 bs=1m
```

```
1179+1 records in  
1179+1 records out  
1236303872 bytes transferred in 46.777995 secs (26429176 bytes/sec)
```

USB 磁碟因目前的安全政策而被鎖定。

按 F2 鍵進入 BIOS 並禁用 Secure Boot。

```
ip link  
iwctl  
device list  
station wlan0 scan  
station wlan0 get-networks  
station wlan0 connect SSID  
ping archlinux.org  
timedatectl
```

不知為何，我決定安裝 Ubuntu。
