

## Trying RAGFlow

<https://ragflow.io>

“resume-en.txt” is not allowed to parse. Basically, the filename that contains “-” is not acceptable. It needs to be renamed to “resume.txt” .

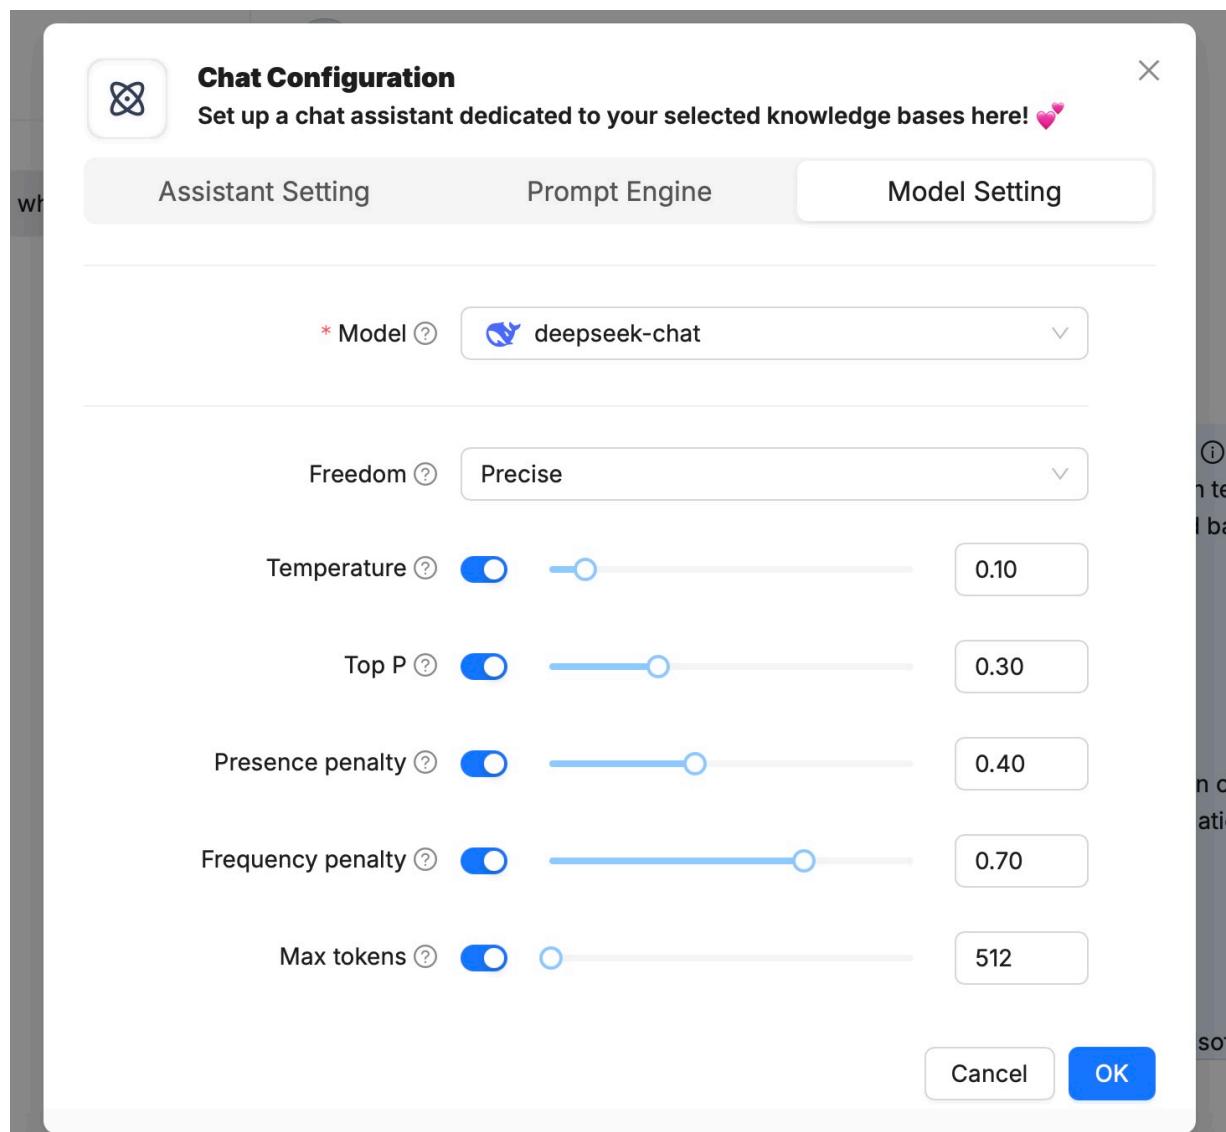

The screenshot shows the RAGFlow web application interface. At the top, there is a navigation bar with links for Knowledge Base, Chat, Search, Agent, and File Management. The Language setting is set to English. On the left, there is a sidebar with a user profile picture and the name "lzwjava". Below the sidebar, there are three main tabs: Dataset (which is selected), Retrieval testing, and Configuration. The main content area is titled "Dataset" and displays a message: "Please wait for your file to finish parsing before starting an AI-powered chat." There is a "Bulk" dropdown menu and a search bar with the placeholder "Search your files" and a "+ Add file" button. A table lists datasets, with one entry shown:

Name	Date	Chunk Method	Enable	Parsing Status	Action
resume.txt	2025 01:05:44	General	<input checked="" type="checkbox"/>	SUCCESS	

At the bottom right, there are pagination controls showing "Total 1" and "10 / page".

Tried it. Works very well.
