

# **Clean Up Disk Space**

## **Settings**

Use the path Settings -> General -> Storage -> Storage settings to find out how disk space is occupied and delete unnecessary files.

## **du**

Use du to find out large files.

```
du -hL -d 1
```

## **Delete Applications**

Delete applications in the application directory.

## **Downloads**

Remove downloaded package dmg files, which can be easily downloaded from the internet.

## **Portable Disk**

Purchase a portable disk and move some files there.
