

SSH connection using IPv6 address

I'm trying to connect to a machine in Hetzner Cloud using IPv6. `ssh 2a01:4f8:c17:2000::/64` doesn't work, but `ssh root@2a01:4f8:c17:2000::1` does.

The IPv6 address was copied from the Hetzner Cloud console.

The `~/.ssh/config` file can be configured to apply different proxy rules for IPv4 and IPv6 addresses. This setup allows you to specify a proxy command for IPv4 addresses while handling IPv6 addresses differently.

```
Host 192.168.1.*  
    UseKeychain yes  
    AddKeysToAgent yes  
    IdentityFile ~/.ssh/id_rsa  
  
Host *.*.*.*  
    UseKeychain yes  
    AddKeysToAgent yes  
    IdentityFile ~/.ssh/id_rsa  
    ProxyCommand corkscrew localhost 7890 %h %p  
  
Host *  
    UseKeychain yes  
    AddKeysToAgent yes  
    IdentityFile ~/.ssh/id_rsa
```
