Configuring UFW

If you're having trouble connecting to certain services, here are some tips to configure UFW (Uncomplicated Firewall).

Allow SSH Traffic (Port 22)

If SSH is blocked, allow it with:

```
sudo ufw allow ssh
```

Allow V2Ray Traffic (Port 1080 or 443)

For V2Ray or other services, allow the necessary ports:

```
sudo ufw allow 1080/tcp
```

or

```
sudo ufw allow 443/tcp
```

Check UFW Status

To view active firewall rules, use:

```
sudo ufw status verbose
```

Re-enable UFW

If UFW is disabled, enable it with:

```
sudo ufw enable
```

Reset UFW

To start fresh, reset UFW:

```
sudo ufw reset
```
